We pride ourselves in being able to provide our clients with superior customer service. We offer affordable prices, a full range of services, and a beautiful location in Garden Grove, California.Q: How to filter/paginate results of Cloud Firestore queries based on Date range in Firestore Android I have a collection of customers and a table displaying all the data of the customers in a listview. I want to filter/paginate results of the queries based on the date range. I am aware that the Firestore doesn't have the pagination. But what I want to achieve is: Fetch all the data from the database. Apply the date range filter/filter/pagination on the data returned. Display the result on the listview. Any ideas, hints or help? A: If you know how the date range should look like, you can simply query the collection with startAt() and endAt() and with a DateTimeField() The startAt() and endAt()-operators take the date as a parameter. Use startAt() before a collection.startAt() and endAt() after collection.endAt() DocumentReference reference = db.collection("SomeCollection").document("SomeID").collection("SomeCollection").document("Some ID").collection("SomeCollection").document f988f36e3a
