Wikiwand: Wikipedia Modernized - For Firefox Crack+

Wikiwand: Wikipedia Modernized is an extension for the Mozilla Firefox browser who's role is to upgrade the way your Wikipedia pages look, feel and behave. The only thing that stays the same is the traditional black text over white background theme, that of course unless you choose the dark theme, which can be both aesthetic and easy on the eyes, especially if you spend most of your reading time at night. More so, you are given the opportunity to choose from a variety of fonts, color palette and the rearrangement of certain UI elements, and some extra tools that will make your Wikipedia browsing more efficient. Keep tabs on your favorite pages easily If you have a Facebook account, you can use it to connect and link it to a bookmark page where you can store all of the Wikipedia pages that interest you the most. More so, you no longer have to worry about manually searching for a page in a specific language, since you now have a scrollable list incorporated that does precisely that for you. There are also other page customization options that perform the changes in real time, so you can always arrange the page to your liking, without worrying that you have to refresh the page. A completely new browsing experience for the world's most famous online encyclopedia Few other programs or add-ons bring such a great change (for the good) the way Wikiwand: Wikipedia Modernized does.
