Getting Photoshop into the Apple Store on April 21 was certainly a big blow for professional image editors. However, the fact that there is no Mac store is a **big** blow in my opinion. Editing images should be accessible to everyone, even everyday users, and the fact that it's not available on Mac is a major setback. It's been a while since I last installed Photoshop but I still remember the pleasure of working with **Color Parks,** showing groups of identical colors to the browser to create a palette. My **Color Schemes** are still there and the current release, Elements 2020, retained this feature. **The new release** also includes **tags that can be used to narrow down the colors in the Photoshop Palette.**
