With a complete redesign to make CSS3 easier to learn and use - including new Retina-quality graphics, a new Layers palette and new CSS-styled document windows - Photoshop moves quickly and is now designed to be easier to use, faster to learn, and more reliable than ever. Photoshop's plug-ins - including InDesign, Illustrator and other Creative Suite tools - are now automatically updated when performing the install. Adobe Experience Manager (AEM) is a revolutionary cloud-native content management solution, offering the familiar and rich desktop web experience in the browser, providing a keen user experience regardless of device or browser. Selection tools have added selectability, making it easier to apply the same edits to many layers or contents, and there's a new "Delete and Fill" tool that can seamlessly replace objects and remove unwanted areas of any image - including those which Photoshop Camera Raw couldn't process. There's a new preview look7, offering an easy, consistent interface so users can immediately see edits immediately reflected in the interface and the document - regardless of how they've made their changes. Plus, Photoshop CC will now be using the native Windows 8.1 style task bar, delivering a more consistent user experience across all applications in the suite. Photoshop's Touch tools retain all the same features users loved, including the ability to create, edit, and save the image in a single click. Although the interface isn't the most user friendly, Photoshop offers amazing power and flexibility. The downside of Photoshop, however, is the steep learning curve that comes along with it. Experienced users who seek the power of Photoshop usually move on to the full version of the program.

but without the hefty baggage of long-term support and maintenance. If you're looking to turn your photos into art, it's important to have on hand a browser that not only serves as a replacement for Adobe's offerings, but works very well and delivers a design experience best suited to web-making or design. If you're looking to get a creative new look for your photos with Photoshop, the new 2020 version is packed with features for photographers. Adobe's new Lens Correction feature is powered by Adobe Sensei, the platform that helps you reshape and correct faces, enhance depth and fix other visual issues. Photoshop is also now able to automatically distinguish between people, pets and even deer from a single image, and even replace human faces with those of animals. This works especially well if the images are of people wearing fur coats. There's also a new design interface, which you can learn and then start customizing right away. This makes its options more intuitive to find and work with. It can also show you as more than just a table of tools; it can bring up your last image, or lets you create a panel just like on an operating system. Plus, it lets you add layer styles, layer photos and move things on a grid. If you like playing with new stuff, Adobe is proud to announce Photoshop's first round of free updates for the year: new non-destructive features, non-obtrusive improvements, and expanded accessibility options. With naturally raised-awareness on the future of accessibility, Photoshop will make several improvements to accessibility. The new features include improvements to content and object identification; making text, shapes and paths easier to select, cut and copy; enhanced detail visibility for the blind, and improvements to onscreen keyboard support. Also, Adobe is working hard to improve quality across the board; for instance, text hinting will be nicer and more informative.
