It lets you create posters of any size in no time. It also.A novel visual function index for task-specific monitoring of driving. In the context of traffic accidents, the inspection of vehicles is an essential task, which is mainly executed by patrol officers. This task includes the description of damages caused by collisions, such as cracks, paint damages, and scratches. The inspection of these damages is challenging for patrol officers due to the different appearances. Therefore, the application of a suitable method for the automated inspection of vehicles is required. In this work, we extend the VFSAD (visual functions similarity assessment) method, originally designed for the similarity assessment of human faces, to the inspection of vehicles. This extension is motivated by the need to develop automated systems for the inspection
